Course Objectives:

- To equip the students with standard concepts and tools at an intermediate to advanced level mathematics
- To develop the confidence and ability among the students to handle various real-world problems and their applications.

Course Outcomes: At the end of the course, the student will be able to

- **CO1:** Develop and use of matrix algebra techniques that are needed by engineers for practical applications.
- **CO2:** Utilize mean value theorems to real life problems.
- **CO3:** Familiarize with functions of several variables which is useful in optimization.
- **CO4:** Learn important tools of calculus in higher dimensions.
- **CO5:** Familiarize with double and triple integrals of functions of several variables in two dimensions using Cartesian and polar coordinates and in three dimensions using cylindrical and spherical coordinates.
